system sieben

Overviews SUF can be used, for example, as elevator panels. In a building, elevator and staircase cores form the vertical traffic axis, which is the most important connection in all high-rise buildings. A means of orientation in the immediate vicinity of the elevator and additionally in the car is an indispensable component of the guidance system. At this point, the visitor gets an overview of all the building's facilities; by spending time in the elevator area, he becomes intensively involved with the „face" of the building. The elevator panel in **system sieben** fulfills its task in a matching, slim design. The use of labeled foils allows the user to update quickly and inexpensively.

Example
The lift tray is the extended version of a DIN A4 interchangeable pocket, which can also be made to order in different heights. The acrylic folding spring is inserted and secured in the lateral holding profile. The lettering is inserted by means of foils and can thus be updated at low cost. Various single-slice carriers are available for a permanent design. Article number of the example: SUF 6020

Unilateral signposts
The acrylic folding spring for the format DIN A4 is only attached to the wall with a profile. With a printer, the inserts can be made quickly and easily, the assembly is easily done with the supplied system key. Printouts on semi-transparent foils look particularly elegant and weightless.

Acrylic folding spring
The asymmetrical signposts have an interesting effect. These particularly transparent and weightless elements are fixed on one side and are equipped with a floating acrylic folding spring.
