

## Door plate with interchangeable slide QTW

The interchangeable slides integrated in the door plate convince with a simple function.

Σ quintessenz

### Variable information

Usually it is the simple solutions that underline the value of an integrated design. The interchangeable slides work where an electrical indicator would mean too much effort.

## Door plate with interchangeable slide QTW

The interchangeable slides can also be integrated into other door plate systems on request.

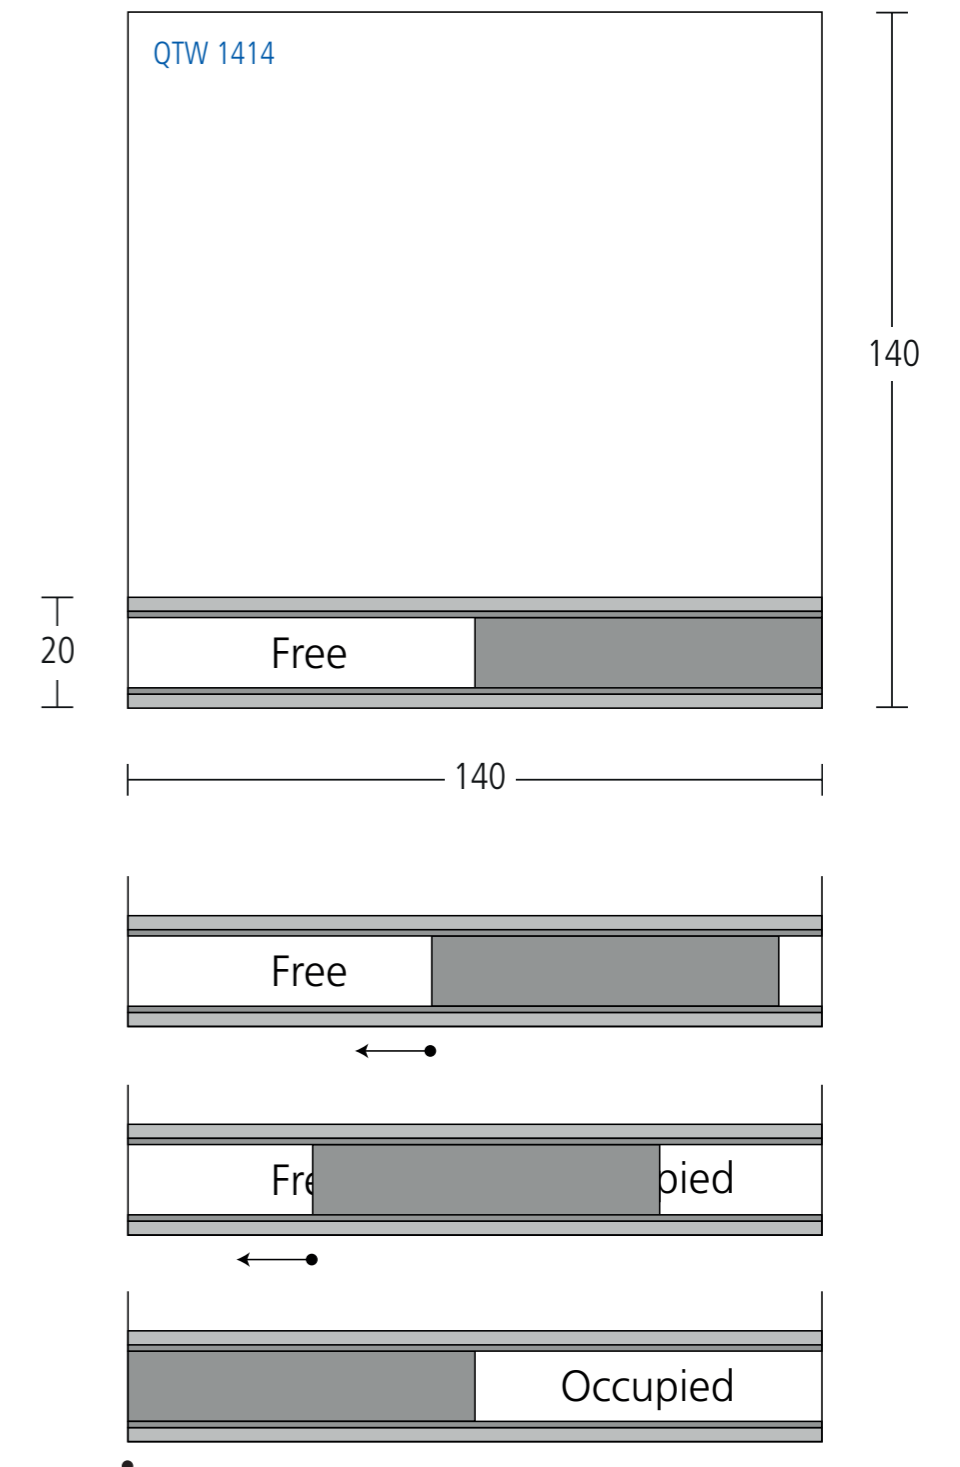

Σ quintessenz

Meeting rooms require a „free/occupied“; indicator already on the door sign in order to avoid disturbances of the meeting. It makes sense to integrate these elements into the existing or planned door sign. In the **quintessenz** system a mechanical slide can also be retrofitted.

### Structure QTWE 1414

The mechanical interchangeable slide can be inserted as a custom-made unit in every square **quintessenz** door plate. With the rectangular door plates, this is only possible in portrait format for technical reasons. The interchangeable slide replaces the normal white insert plate. An individually labelled strip is inserted into the aluminium profile, a protective foil and the metal slide are placed over it. The acrylic screen for covering the information area has a special size.

Article	Material surface	Size	Variants
QTWE 1414	stainless door plate	14	Installation of a interchangeable slide is also possible with other door plate sizes
QTWS 1414	synthetic material door plate (only for size 1809 and 1414)	14
