Doorplate aluminum STA

A solid door sign in elegant aluminum look without visible bracket.

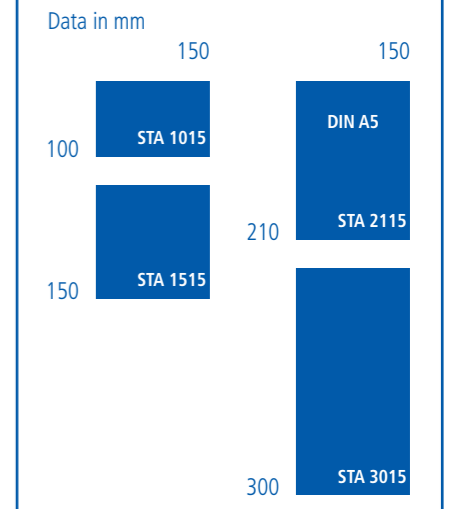

For doorplates that require frequent, quick replacement of the lettering, the **system sieben** offers a simple variant with narrow, lateral edges. The tensioned curvature corresponds to the other elements of the system and thus offers an interesting solution for areas where a folding spring would be too delicate. The design, which is closed at the top and bottom, offers little surface for vandalism and guarantees perfect hold of the text insert. The text inserts, which can be updated by the customer, can be changed easily without the use of special tools.

Mounting

The aluminum profile is anchored to the wall with screws and dowels. Gluing is also possible. On the back of the sign, there is an adapter profile in the center, which also makes the sign compatible with profile posts of the other system components. The lettering is protected behind a pane of unbreakable, anti-reflective polycarbonate.

The system profile and the end covers are solidly made of aluminum.
