The interchangeable sliders are inexpensive to integrate into new or even existing door signs. They are easy and quick to put into use, as they do not require any electrics or similar. Nevertheless, they can be adapted to any situation by individual texting and immediately fulfill their function. The texts can be chosen freely depending on the situation.

Within a control system, there are situations in which information about the availability of rooms or states must be displayed. A simple solution is a changeover slider, which is integrated into a standard sign or – even subsequently – added as an additional, separate module. Depending on the purpose, for example, „free/occupied", „Do not disturb!" or „present/absent" can be displayed. In addition to the changeover sliders for manual operation, automatic displays are desired in some cases. These possibilities can also be realized in the **rohr+ fläche** system.

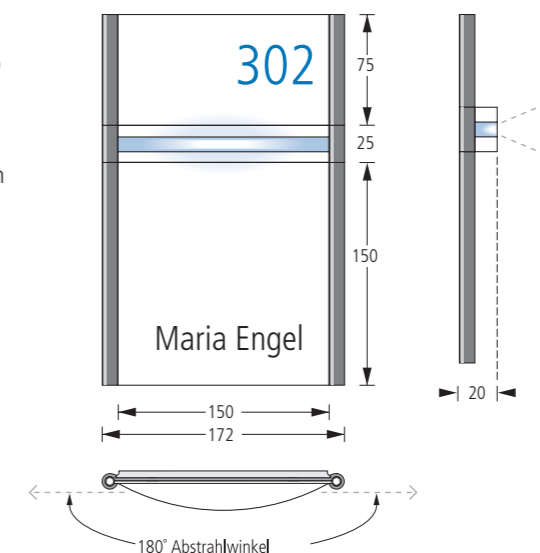

Doorplate with integrated change slider
with pictogram inlay, also available with room number.

RTS 15 with LEDs
This door sign can be equipped with 1 to 3 signal modules as required. Depending on the light color of the integrated LEDs, the switched module shines intensively in the signal colors red, green, blue or also in white.

The horizontal beam angle of 180 degrees creates a high level of attention even in narrow hallways in conjunction with nurse call systems.
