Variable information magnetic wall SV

Magnetic board with perforated sheet or steel Whiteboard can be used individually.

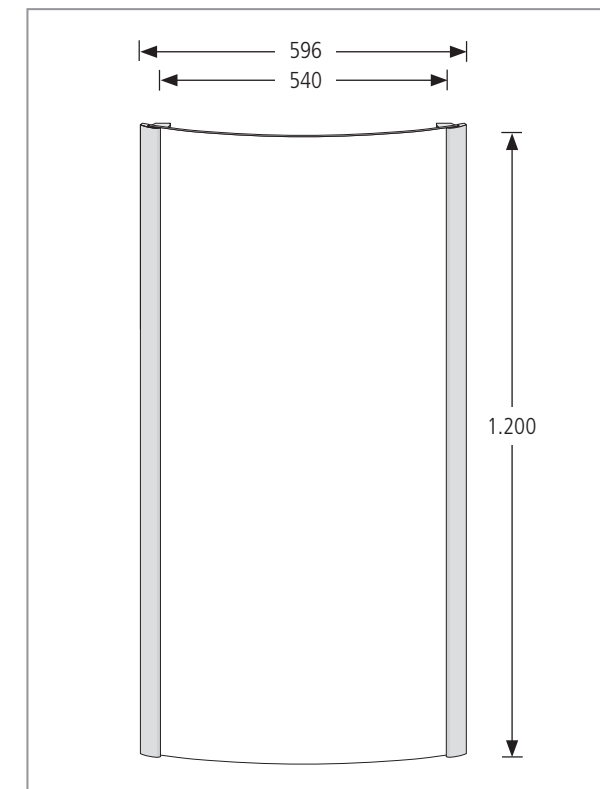

system sieben

This magnetic board made of perforated sheeting – matching the signposts and overviews – offers a medium for notices, messages and news. The perforated sheet grid 3/5 appears semi-transparent and gives the board an elegant, floating appearance. Due to the curved shape, the board achieves a high inherent stability. The information is attached with holding magnets, the surface is powder-coated and thus permanently scratch and abrasion resistant. Perforated metal surfaces can also be realized as column cladding and in combination with other information elements. We are happy to support you in the realization of your concept.

Example

Besides the standard color white RAL 9010, the surfaces can also be coated in other RAL colors. As a writing board version, the element is equipped with a continuous steel sheet surface instead of the perforated sheet.

Example item number: with perforated sheet SVL 12054

SVL

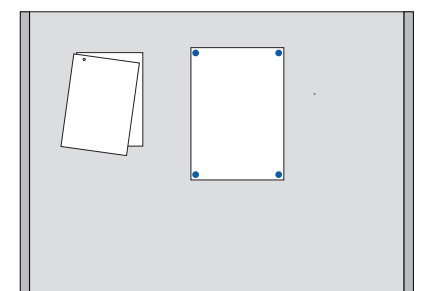

Magnetic surface made of a perforated sheet.
