

## Door plate with LED technology QTEB

Optical nurse call systems signal in which room help is needed.

Σ quintessenz

Each colour-signal is assigned to different status information. This way, medical staff already know in the corridor where which kind of help will be needed.

## Door plate with LED technology QTEB

Status signals can be integrated in door plates.

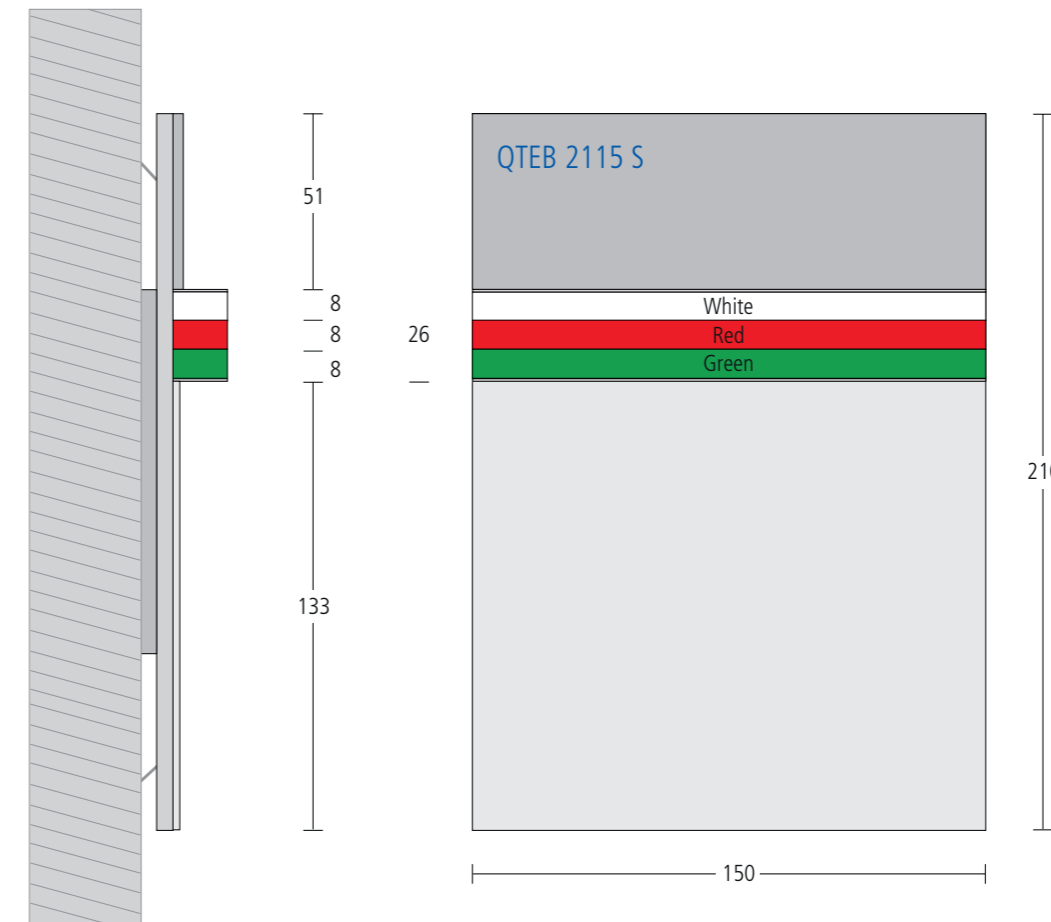

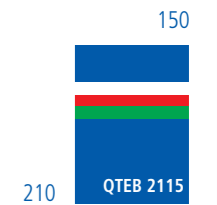

Σ quintessenz

Integrated LED light indicators are convenient. With this technology, clearly illuminated signal colors can be integrated into the flat quintessenz door sign. Five different light colors can be used here. The signal colors red, green, yellow and blue are possible, as is white illumination of the texts. The version for nurse call systems lights up in white, red or green depending on the control.

### Standard sizes

Data in mm

### Structure QTEB 2115

The anodised aluminium head panel can be permanently labelled with room numbers and functional terms. The LED boards are integrated in acrylic, which are shielded and light up in different signal colours. These can also be seen from the side and is comply with DIN VDE 0834-1 even at an ambient light intensity of 500 lx. Below the LED signals there is the inscription which can be exchanged by means of an insert foil. It can be removed with a suction cup as on the QTE door plates.
