

Brochure stand QMT

Completely made of metal matching the quintessenz guidance system.

Σ quintessenz

Clear forms and slim stability can be brought to a common denominator with the **quintessenz** system. The brochure stand belongs to the family of mobile stands that can be placed wherever they are needed.

Brochure stand QMT

The modular structure can be easily integrated into the design of the rooms.

Σ quintessenz

Many information systems on the market lack a holistic concept. This becomes particularly clear when a brochure stand is placed in the foyer or in the customer service area that does not match either the furnishings or the guidance and orientation system. **quintessenz** integrates all requirements, from interactive information terminals to free-standing or wall-mountable brochure storage elements. The modular nature of the system allows for different dimensions to suit the user's needs.

Dimensions

Brochure shelves should be arranged in the ergonomically favourable grip area between 0.5 and 1.6 metres high. The most commonly used stand elements have visible widths of 420 and 600 mm, the overall dimension is 15 mm wider in each case. In the case of shelves for DIN A4 brochures, 4 shelves on top of each other are possible. The 300 mm high top panel can be permanently labelled or designed as a DIN A3 interchangeable module at an extra charge.

Type of construction

The back can also be equipped with brochure shelves or used as a pin board if required. In the case of single-sided elements, it is closed flush with a continuous aluminum panel. If wall space is available, the **quintessenz** elements are suitable for wall mounting. In this case, the basis is the 22 mm slim edge profile, which can also be fitted with wider shelves up to 1,190 mm. The other standard widths are 420, 600 and 840 mm.
