

## Doorplate sandwich clip TNTSC

Floating transparency, high-quality materials and tool-free label change.

□ transparenz

Compared to the classic glass signs with four fastening screws, the signs in the **transparenz** system convince with their clear, concealed fastening. They give the inscription area a transparent, floating appearance, which is the special charm of the glass signs.

## Doorplate sandwich clip TNTSC

Label change with a fingertip. The spring-loaded closing glass pane is unique.

□ transparenz

Transparent doorplates are ideal for modern glass architecture. Glass signs with two or four screws are therefore seen „on every corner“. A major disadvantage of most systems is the inconvenient replacement of the lettering. To open the four screws already requires patience. The screws can fall off or even the whole glass pane. The new lettering insert must be precisely perforated to fit, and precise spacing must also have been used beforehand during installation. The sandwich clip door label of the **transparenz** system is an ingenious innovation! A fingertip is all it takes to change the text insert.

### Clipfunktion

The ingenious spring mechanism requires only minimal space in the pair of aluminum retaining profiles. The locking force can also be adjusted so that the movable cover disc either remains firmly closed or can be opened easily with the index finger. It goes without saying that all parts remain on the wall and hands free when changing inserts.

Also available with integrated change slider glued to the door plate, which impresses with its simple function. (TNTSCW)

### Standard sizes

Data in mm	150	180
	150 TNTSC 1515	150 TNTSC 1518
	150	210
	220 TNTSC 2215	160 TNTSC 1621

### Dowelled screw mounting

in solid masonry, concrete or stud walls is standard. Vertical profile mounting is also possible. The glass panes are sandwiched for sandwiching a printed insert of paper or foil. The area dimension is 1 mm longer than the aluminum profile for faceted materials. Both panes are securely connected with one half of the profile each. The clamping can be adjusted from the bottom edge. In addition to the temporary text insert, the metal profile can also be labeled. Room code, company logo and also Braille are thus permanently preserved.
