

Overview freestanding SM

Freestanding stele, which can be easily and quickly moved to the desired location at any time.

system sieben

Overview freestanding

One of the most versatile components in a signage system is a stele that can be placed anywhere. They fulfil their task as an overview or distribution signpost as well as a carrier for event information wherever there are no walls. Temporary information, which is otherwise often presented as unattractive provisional solutions, is given a professional framework.

Overview freestanding SM

Can be used in any place without problems, even without a wall or ceiling.

system sieben

Overview panels do not always have to occupy large wall surfaces. In many cases, a free-standing information stele has a more discreet effect as a house overview and also takes on an object character. In the entrance hall next to an information counter, a slender column leaves enough space; next to self-supporting staircases or on glass lifts, it fulfils the function of a floor overview. Integrated schematic floor plans can facilitate orientation.

Thanks to its versatility, the mobile info stele in **system sieben** is ideal for a house overview. The labelling with adhesive text allows the contents to be updated quickly and cost-effectively, while the continuous surfaces offer the advantage of free graphic design options. A modular design in which individual segments can be exchanged is also possible.

Draufsicht

Freestanding, mobile column

Due to the width of 420 mm, it is also possible to integrate interchangeable modules for DIN A3 sheets in landscape format (technical description in the Variable Information).

The base plate unit made of powder-coated steel forms a centre of gravity that gives the element stability. Soles made of semi-rigid plastic provide safe scratch protection. For sensitive, smooth floors, a felt covering can be ordered at no extra charge.
