

# Pylux QAGB

Slim pylons with interchangeable glass panels and minimal edges.

Σ quintessenz

### Light to the outer edge!

This is only possible with the use of special LED technology and sophisticated system development.

# Pylux QAGB

Homogeneous illumination with minimal Edges set new standards.

Σ quintessenz

### Almost without edge

The LED-lit steles and pylons require less than 2 cm glass surround. The illumination is photometrically optimized in such a way that it works homogeneously up to the outer edges.

### Simple revision to the front

Each glass panel is attached in a concealed manner and individually exchangeable to the front.

### Standard dimensions

Basis are the outer dimensions of the steles and pylons of the type QAA.
