

Interchangeable glass modules PVW

Elegant appearance of floating glass surfaces with unique mounting and optimum function.

Floating appearance

primavetro requires neither frames nor visible brackets. The design is so flat that the wall bracket is barely noticeable, even from the side. Together with the transparency of the cantilevered part, this creates a floating glass look.

Interchangeable glass modules PVW

Paper-flexible labelling behind glass with 100% graphic area

The glass cover plate can be removed to the front. One benefit of **primavetro**, wherever lateral sliding out is not possible on site. The tool-less change of the label foils is hidden behind a simple technique.

Tool-free replacement

Only those who know the function will be able to open the front glass pane with two fingers and without exerting any force. It is almost impossible for the pane to accidentally fall to the ground and break. A magnet locks the catch and secures the glass permanently.

Frameless construction

A sandwich consisting of two transparent panes and a label inscription on foil or paper inserted between the two panes is the proven practice of the trendy glass sign. With the set-back, only 8 mm flat holder, **primavetro** sets completely new standards.

100% graphic area

primavetro offers sufficient graphic space for individual graphic area. The colored backed area can be labeled with logo and text information on the front. The film in A4 format, which is inserted between the transparent surface of the front white glass panel and a fixed acrylic panel behind it, is suitable for self-labeling.

Narrow building situations

The **primavetro** sign system blends harmoniously into the architecture of modern buildings. It was developed for limited surfaces of modern glass partition wall systems.

Mounting

The mounting unit can be mounted on concrete, masonry or plasterboard walls or with double-sided adhesive tape to glass or metal surfaces.

PVW 3021	PVW 3021		
PVW PVW stands for the primavetro direction sign	30 height in cm 21 width in cm	The holder is hidden behind a panit layer. Its standard color is a neutral light grey (similar Pantone 427)	The measure 69 mm cannot be undercut. The maximum glass height is 300 mm, the maximum glass width is 420 mm.
