

Overview wall mounted TNU

Transparent floating information convey lasting elegance and value.

Overview wall mounted TNU

The innovative glass clamping function without glass drilling and visible screws.

transparenz

transparenz

Compared to the classic glass signs with four fastening screws, the signs in the system **transparenz** impress with their concealed fastening. They give the inscription area a transparent, floating appearance, which is the special attraction of the glass signs. The materials comply with the highest fire protection class A1 – non-combustible.

In a signage system, overviews show all reachable destinations and facilities. The size of an overview panel must be selected depending on the complexity of the object. Transparent surfaces made of glass, acrylic glass or even completely different material up to 8 mm plate thickness offer the planner diverse and creative solutions.

The overview boards

consist of an information surface with two holding profiles. They are standardized in various formats. Securely anchored to stable walls, the holders are suitable for areas of up to approx. 1 m² with a weight per unit area of approx. 20 kg for 8 mm toughened safety glass. With significantly lighter acrylic glass, formats up to 1.5 m² can usually be fastened without problems.

Customized products

may vary in height/width ratio. Very large glass elements must in any case be held with special constructions. Surface stability, weight and wall anchoring must always meet the static requirements. Our customer consultants coordinate these with the planner on site.
