

door plate standard QTS

For all, who are searching a simple solution and do not have time or much budget.

Σ quintessenz

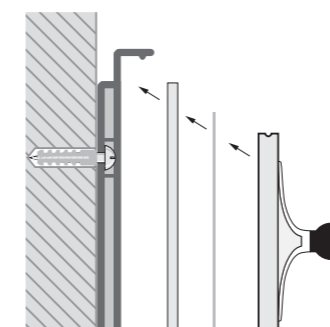

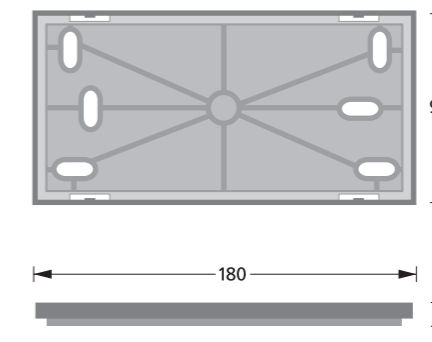

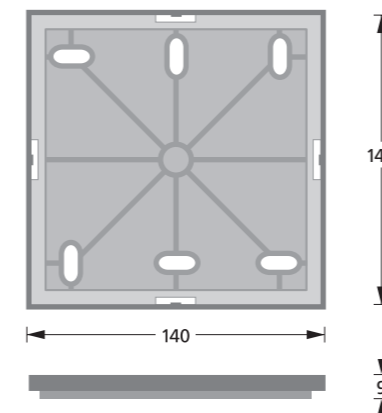

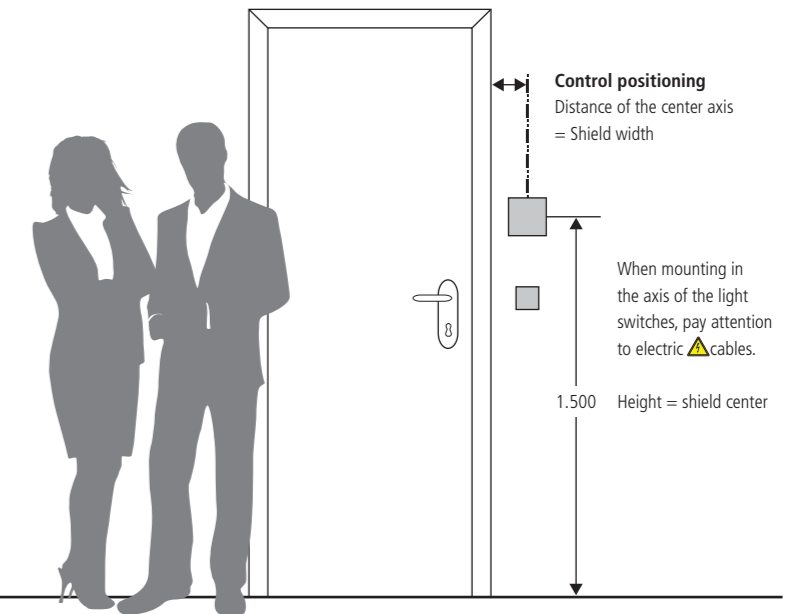

In the retaining element made of high-strength ABS, recesses and fixing holes are recessed for dowel mounting; alternatively, of course, adhesive mounting (for example on glass) is also possible. Grey carriers (RAL 7040) are available as standard version and thus from stock at short notice. The colour slate grey"; (RAL 7015) is also available without extra charge. The scope of delivery includes the plastic carrier, the acrylic disc, a white insert plate and the mounting material.

door plate standard QTS

the two most popular formats as a low-cost, simple basis.

Σ quintessenz

In addition to the stainless steel door plates, a plastic version is also available, whose through-coloured carriers can be cast in various RAL colours. The two most popular formats of the stainless steel version are adopted, so that the acrylic plate and insert plates fit into both designs. For technical reasons, the plastic shield has a different force. The construction height is 9 mm with a visible edge of 6,5 mm and a shadow gap of 2,5 mm.

Structure

The acrylic plate with the printed text are hold by into worked nose. The revision is with the delivered Hoover easy possible. The acrylic plates are, depending on inlay side, glossy or anti-reflex. One white plate coverst the fixing of the door plate, so the using of transparency foils is possible.

Assembly

Wall mounting is usually done with screws and dowels. The clever arrangement of the fixing holes allows quick and uncomplicated installation. Fixing with clue strips on smooth areas is possible, too.

Further ways

In addition to the „normal“ using as door plate, for example with room numbers, divisions and names, attaching pictograms and warning signs is also possible.

Article number

The article number consists of a letter abbreviation for the product charge and a numerical code for the size. The size in the article number is a rounded size.
