Labeling Variants

The Classics QWA - QDA - QFA

They are mostly lacquered and permanently inscribed with slide texts or the digital m-print (material direct print).

The Basic Version QWAI - QDAI - QFAI

The aluminum plate is located behind the protective edge for the flat labeling with attached digital printing foils. Together with the foil, the basic version offers flush fit surfaces with an anti-skid protection. To change labels, the old foil is removed and a newly printed foil is glued. All surfaces are silver matt anodised.

The Multipurpose QWV - QDV - QFV

The multipurpose signs have glass covers protecting transparent or paper inlays. They may help to save costs in case of frequent inlay exchange.

Mounting Models

Wall signs QWA ...

They are equipped with a continuous information carrier on the front side. The special fastening techniques allow flat designs without visible screws.

Banneres QFA ...

They are usually wall-mounted elements, which can be seen on both sides in the longitudinal direction of corridors. They are therefore also called booths or nostrils. They are fixed by means of an adapter rail, which allows a wall distance of approx. 20 mm. The design of the banner shields is also suitable for direct mounting as ceiling panels with low false ceilings. The minimum height of 2.100 mm must always be observed!

Ceiling Signs QDA ...

These signs provide customizable labeling space on both sides. For a ceiling-hanged installation, they come with integrated fine steel wire as well as comfortably adaptable mounting system which also features a variety of anchors for different ceiling materials. These are also deliverable separately.
