

GUIDANCE AND ORIENTATION SYSTEMS

made in Germany

Quality, innovation und design are the factors behind our success

Helping people to reach their goals reliably and without detours is something we have been practising since 1988. Our trademark is a unique synthesis of innovative technology and unmistakable design. With our signage systems **rohr+fläche**, **quintessenz**, **transparenz** and **system sieben**, as well as the stand-alone elements of the **tristan series**, we offer architectural signage, orientation and information systems for analogue, digital and tactile projects. In cooperation with our customers, with architects, planning engineers and designers we are able to create highly functional products of outstanding aesthetic quality and have become an inspirational innovative trendsetter. Numerous awards including the Bundesdesignpreis (German Design Award) underscore our company's commitment to high standards.

Thanks to in-house development and production we can guarantee highest quality in the finest detail, short delivery times and unparalleled consultation services. Product innovations are our passion, and with the **rohr+fläche** range we have established an international standard. Trendsetting product solutions from **meng** are held in high esteem worldwide. Our products are to be found in a wide variety of sectors: in trade and industry, administrative and office centres, universities and schools, cultural and leisure amenities, hospitals, senior living and senior care facilities, media centres, trade fairs, convention and shopping centres, hotels and in the catering business.

...a family run business committed to high standards.

...exceptional product systems for customised product and service requirements.

ANALOGUE DIGITAL TACTILE

Material competence and technology expertise give our product range a competitive edge

Σ quintessenz

Focus on essentials. Timeless frame-free signs can be integrated in any form of architecture.

□ transparenz

Signs made of glass and metal serve as door plates, directional signs and steles that are easy to change. Transparent elements for use in a glass-dominated architecture.

— roh+fläche

This first consistent sign system developed by **meng** for self-labelling has since become classic and a global standard.

system sieben

Arched information surfaces create a feeling of lightness and exceptional elegance.

tristan SERIE

These universally applied, illuminated stand-alone elements combine aesthetic functionality with own image advertising. As a mobile, multifunctional eye-catcher they are perfectly suited for trade fairs, events and for use in the hospitality trade.

Custom-fabricated signs

Our extensive range of tailor-made products in glass, acrylic, aluminium and stainless steel reflects our thoughts and proactive approach to the business of our customers.

...the brand name meng stands for innovation.

Extensive experience and vertical range of manufacture

Our range of services covers all processing techniques for the most diverse materials and the integration of digital signage, raised touch scripts and wall-mounted displays in conventional guidance and orientation systems.

Sheet metal processing

in aluminium, stainless steel and sheet steel. Shearing, trimming, bending, CNC milling, welding, drilling, sandblasting, engraving, painting, coating, gilding.

Processing of aluminium profiles

Sawing, CNC milling, drilling, welding, anodising, painting, powder coating.

Welded structures

made of steel, galvanised up to a height of 6 m, in aluminium or stainless steel.

Plastic processing

using mostly acrylic sheet material, partly in polycarbonate and PVC. Sawing, CNC milling, gluing, thermal shaping, 3D contours.

Paint shop

with our own colour mixing system and over 3,000 formulas for individual colour design in all RAL colours, pantone shades and according to the NCS colour system, including graffiti protection coatings.

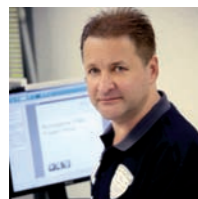

Processing

of glass sheets for glass signage systems, in the form of glass-door displays or large glass steles.

Labelling.

as large digital prints on film, UV print directly on solid materials, as screen print, and also with adhesive film. Engraving and raised touch scripts for the visually impaired, including Braille and relief letters.

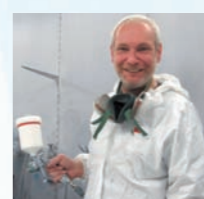

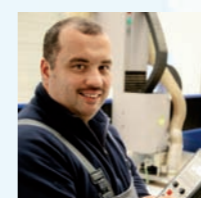

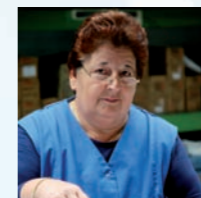

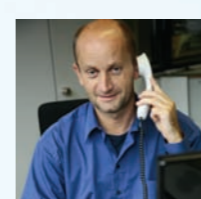

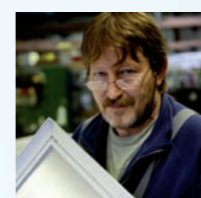

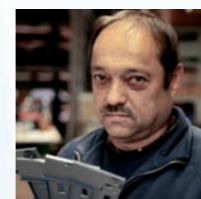

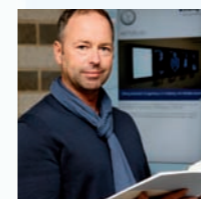

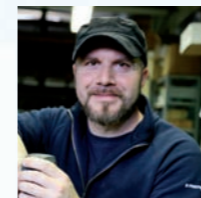

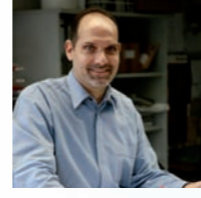

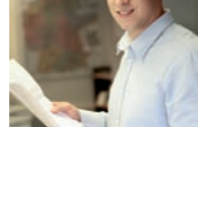

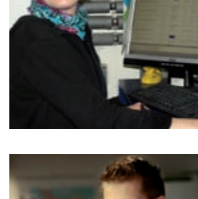

Facade logos made of stainless steel, aluminium and plexiglass, illuminated letters and banners, customised light boxes with punched-out script and special colour effects protected under an anodised coating.

The people at meng

Thanks to our own product development, design and production at the company headquarters in Birkenfeld we can implement demanding customer tasks with a high level of competence, flexibly and independently, to meet the customer's needs and short-term deadlines.

Our highly qualified team is committed to ongoing professional development and is eager to face all new challenges.

...we set trends in guidance and orientation systems.

...the perfect partner for architects, planning engineers and designers.

We feed your ideas

Interdisciplinary work with architects, planning engineers and designers enables us to achieve the best possible results in the planning and design stage. Our enormous know-how in technology and competence in materials make us the ideal production partner for signage system developers. Our signage products are based on a comprehensive modular system for innovative profile and material solutions.

Using this modular system we are able to create guidance elements with a consistent design in all product ranges. Our product portfolio also includes the customised production of special dimensions and unusual surfaces. We see our greatest strength in our ability to implement any solution specified by architects, planning engineers and designers.

Our guiding principle focuses on ecology and the economy

Our philosophy is the foundation of our business success. We are constantly making investments to further optimise our systems and services and enhance our quality standards, also for the future. The customers and partners of **meng** highly regard the values we cherish in our relations. These include tolerance, respect, honesty and performance. Our products meet the highest ethical standards. For us, "Made in Germany" is more than a mere label. Our company headquarters in Birkenfeld also serve as our production facility where we award preference to source materials from suppliers in the region. In addition, we are consistently optimising the way we use energy and raw material resources.

We also maintain a constant focus on our duties as a responsible employer, on safety at the workplace and on fostering a friendly, helpful and honest working environment as well as equal treatment at all levels.

The portfolio at **meng** reflects our company's customer-oriented thinking and conduct. The unique combination of innovative technology and design has brought us numerous awards and set new benchmarks. Of course, we also respect the ideas of other players in the market and their proprietary rights. We expect the same of other providers and customers, which is why we support the initiatives put forth by the German industry to combat theft of intellectual property without consequences.

...with a responsibility for people and the environment.

...meng stands for exceptional service.

European-wide consulting network

A guidance system is a lot more than simple signage. **Meng** plans and designs functional orientation and way-finding systems. With our European-wide network of consultants we can deliver our accumulated competence and expertise at the respective site. Above and beyond consulting services, planning, design and implementation of our guidance and orientation systems we also offer assembly, maintenance services and years of availability guarantee.
